

Rahmat Hidayat

QA Engineer | QA Automation | Ex-Web Developer

+62882009212442 | real.rahmathidayat@gmail.com | <https://rhmt-hidayat.github.io/resume-qa/>
Jakarta Selatan, DKI Jakarta, Indonesia

SUMMARY

QA Engineer with 1,5 years of experience in manual testing, and 3 years of experience as a Web Developer specializing in PHP Programming. Skilled in functional testing, API testing using Postman, SQL validation, and automation testing using Selenium WebDriver and Python. Strong understanding of SDLC, STLC, debugging, backend validation, and test case scenario from both QA and developer perspectives. Passionate about improving software quality through efficient testing strategies and automation.

WORK EXPERIENCE

QUALITY ASSURANCE ENGINEER - Contract

Jan 2025 – Present

PT. Satria Antaran Prima (SAP Express)

- Execute 20–30+ test cases for each feature module to ensure application quality and stability.
- Perform functional, regression, smoke, and exploratory testing across web applications.
- Identify 10–20 defects per testing cycle including critical bugs before production release.
- Validate backend data using SQL queries to ensure data consistency and integrity.
- Design and manage structured test documents using Google Sheets to track the entire testing cycle, from test case design and bug reporting to closure reporting.
- Collaborate with developers and cross-functional teams in validating feature requirements and overseeing the bug lifecycle from reporting to final verification, ensuring product quality standards are maintained.
- Manage the entire bug lifecycle consistently, from identification, reporting, to final verification using an internal bug tracking system.
- Implement Selenium Python automation scripts for 20%-30% of key test scenarios to speed up the regression testing process.

Achievement : Helped identify critical production issues prior to production deployment.

BUSINESS DIGITAL DEVELOPMENT - Contract

Jan 2022 – Dec 2024

PT. Satria Antaran Prima (SAP Express)

- Contributed to the development of the System Aggregator module using PHP CodeIgniter and performed debugging with backend validation and frontend display.
- Developed feature modules for delivery complaint tickets and discount card applications with backend validation and requirement system flow.
- Conducted user requirement analysis to identify potential ambiguous logic in the development of the company's internal systems.
- Performed debugging and regression testing (UAT) on all internal systems to ensure the process flow is running according to user requirements.
- Compiled user manuals and technical documentation and provided feature implementation training to the operational team to ensure the system is well received by users.

WEB PROGRAMMER - Freelance

March 2021 – Nov 2021

PT. Schlemmer Automotive Indonesia

- Designed and developed backend logic of PHP/CodeIgniter based MRP system, and ensured database validation and integrity for inventory accuracy and production schedule flow.
- Performed debugging and backend validation testing for query optimization in the production material calculation module. This helps prevent data input errors and improves efficiency.

- Built a ticket tracking and employee performance system with a focus on workflow integrity, ensuring ticket status is synchronized and monitoring employee performance.
- Built a company news portal web system using WordPress with customized feature requirements including cross-browser compatibility testing and display responsiveness (UI/UX).
- Analyzed and translated operational business requirements into technical flows with minimal errors, and compiled technical documentation to facilitate the system development process.

WEB PROGRAMMER - Internship

Aug 2020 – March 2021

PT. Kalbe Morinaga Indonesia

- Developed an HR form submission system with the PHP framework CodeIgniter with a focus on the accuracy of the multi-level approval workflow.
- Ensured strict backend validation to improve input data accuracy and prevent duplication of digital form submissions to ensure data integrity.
- Conducted self-testing on the HR form module to ensure the features run according to user requirements specifications before the deployment stage.
- Prepared comprehensive project technical documentation, including system flowcharts, system requirements specifications and scenarios for testing.

EDUCATION

Bachelor of Informatics Engineering

Universitas Buana Perjuangan Karawang | Sep 2016 - Sep 2020

GPA : 3.61 / 4.00

CORE SKILLS

Testing & QA : Functional Test, Regression Test, API Testing, UAT, Test Case Scenario, Bug Tracking, Qase.io.

Automation & Tools : Selenium WebDriver, Pytest, Postman, RestAssured, Git, Github Actions.

Programming & Database : PHP, JavaScript, Python, SQL Query, Rest API, MySQL.

Methodologies & Proses : Waterfall, SDLC (Software Development Life Cycle), STLC (Software Testing Life Cycle).

Soft Skill : Communication, Problem Solving, Critical Thinking.

ADDITIONAL INFORMATION

Project : Coresys Web Automation Testing

 https://github.com/rhmt-hidayat/Selenium_Coresys

Tech Stack : Selenium Python, Pytest, Page Object Model (POM), Allure Report

Features : Test Login, Test Input Data, Test Upload File, Screenshot, Validation Assertions

Project : Web Automation Testing

 https://github.com/rhmt-hidayat/web_saucedemo

Tech Stack : Selenium Java, Maven, Page Object Model (POM), JUnit, Cucumber, Report

Features : Test Login, Test Input Register, TestRunner

Project : API Automation

 https://github.com/rhmt-hidayat/fake_api

Tech Stack : RestAssured, Java, Maven, TestNG

Features : Get request, Post request, Assertion
